All Provençal door models have compositions available with glass, straw, and fabrics. Provençal models are available in satin, microtexture, and matte metallic finishes. For other finishes, please consult the factory.

MODELS LINEAMENTI COLLECTION

Line

Commonly known as slatted, our Line model can be used for fronts as well as panels. Its total thickness is 25mm, consisting of a 15mm panel combined with 10mm thick slats. The slats have a standard width of 20mm, but this can be customized. The minimum spacing is 10mm, which can also be adjusted to larger dimensions. The slats are assembled before painting, ensuring a seamless and uniform finish!

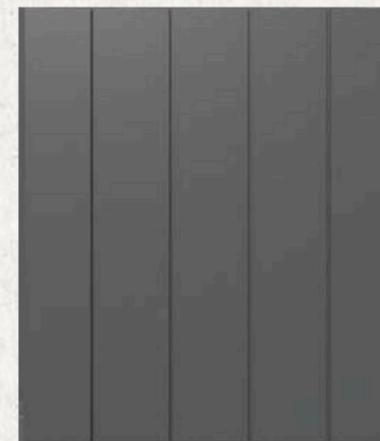

Velutao

The Velutatto model is the perfect blend of technology and craftsmanship. The micro-machined lines on the MDF are hand-sanded one by one to ensure a high standard of quality and a uniform finish. The lines are symmetrically crafted with predefined width and depth.

Draped

With a 3D effect, the Drapped model embodies uniqueness. Featuring bold machining that adds depth and volume, it has standardized measurements for width and machining depth. Available for use in panels, this model adds a special touch to the décor of exclusive spaces.

Frisos

The Frisos model offers customization options, allowing for either a symmetrical or asymmetrical design. The standard groove size for this model is 3mm in width and 3mm in depth, while the number of grooves and the spacing between them can be adjusted to create personalized designs.
